MavionTech
Momentum with Vision

PORTFOLIO EXPANSION · CHECKPOINT 1 · SOURCE AUDIT AND CONTENT ANALYSIS

HeeLIKS and Vyaas AI

What the two new products really do, what their source decks get right and wrong, and how they will join the MavionTech portfolio.

EXECUTIVE SUMMARY

Two deep, code-verified products; both decks need rebuilding, not polishing

84
source slides rendered in PowerPoint and inspected (54 + 30)

212
product screenshots mapped to modules (181 + 31), all 2400 px wide

20 · 14
functional modules in HeeLIKS · Vyaas AI, each checked against the code

5
source claims to correct or qualify before reuse (pages 6 and 9)

What we found

- **HeeLIKS** is a multi-tenant inventory, point-of-sale and B2B order-to-cash platform for Indian stock-driven businesses. Its depth (GST, FEFO, ledger, distributor order-to-cash) is fully evidenced by 181 screenshots and a 127-row coverage map.
- **Vyaas AI** is an enterprise AI assistant: cited chat over company knowledge, document and image generation, a sandboxed coding agent that opens pull requests, and organisation governance with cost control.
- Both source decks were produced in their own visual themes (indigo/lavender, dark navy). Neither follows the locked MavionTech system, and many slides shrink 3–4 screenshots to an illegible size.
- Key claims check out against both code repositories (D:\heeliks, D:\llm, read-only): test counts, reports, plans, gVisor sandbox, BM25 retrieval, encrypted secrets.

What needs a decision before redesign

- **Product accents.** Both brand blues sit almost on top of existing accents (Agastya, PragyanNxt, Vortex). Page 12 proposes two new accents.
- **Catalogue claim.** The approved catalogue says “a dedicated database per customer in all six products”. Vyaas isolates at organisation level in a shared database, so the line must be qualified when the catalogue grows to eight.
- **Vyaas evidence gap.** No screenshot shows the coding agent's pull request, its headline promise. The capability is verified in code; the deck will say so without a screen unless a capture is supplied.
- **heeliks.com** was down during the audit; website copy was read from the site templates in the product repository instead.

Recommendation Approve the positioning and outlines on pages 10–11 and the accents on page 12; then build both decks.

SOURCES INSPECTED

Every source file opened; three differ from the brief

SOURCE	WHAT IT IS	USE IN THIS PROGRAMME
HeeLIKS_Enterprise_Sales_Deck.pptx	54 slides, own indigo theme; built from the code by the product team	Content and narrative source; not reused visually
HeelIKS_screenshots/ (181)	18 capture groups A–Z: auth, B2B, catalog, dashboard, exports, inventory, console, import, partners, reports, returns, POS, settings, procurement, personas, website, dark mode, 4 industry workspaces	Primary product evidence
HeeLIKS_coverage.csv (brief: .xlsx)	127 rows: 22 modules, 89 features, 16 USPs; each with persona, URL, screenshot and slide; all marked covered	Module map and screenshot index
HeeLIKS_deck_work/	product_analysis.md, discovered_inputs.md, capture log (194 captures with URL and HTTP status), coverage, build scripts	Positioning, buyers, code evidence, roadmap
HeeLIKS_exports/ (9)	Real generated files: sales and GSTR-1 Excel, inventory, AR aging, PO, A4 invoice and challan PDFs	Proof of document outputs
heeliks.com (site down)	Read from templates/site in the repo: home, features, solutions, pricing, contact	Contacts, add-on pricing, perpetual-licence terms
Vyaas_Enterprise_Sales_Deck.pptx	30 slides, dark navy theme	Content and narrative source
Vyaas_screenshots/ (31)	Chat (7), knowledge (2), documents, assistants (2), tools, workspaces (4), organisation (5), billing (3), analytics, admin (2), notifications, login	Primary product evidence
deck_work/	Vyaas product_analysis.md, discovered_inputs.md, coverage.csv (44 rows, never updated: all *pending*), 30 render PNGs, build scripts	Positioning and module map
Product repositories	D:\heeliks (stocksage @ 3b66227) and D:\llm, read only	Spot-verification of claims
Master_Portfolio_Content.docx	**Not present** in the transformation folder	Not created; the brief says “if present”

Naming: the product spells itself **HeeLIKS** (capital L) in the app, logo, site and code. The brief’s “HeelIKS” paths are the same folders on Windows, which ignores case. Deliverables will use the product's own spelling.

Inventory, POS and distributor order-to-cash on one stock ledger

Positioning

A multi-tenant inventory, point-of-sale and B2B order-to-cash platform for stock-driven Indian businesses. Every purchase, sale, return, transfer and count posts to one append-only stock ledger, in a database that belongs to that customer alone.

Problem it solves

Spreadsheet stock plus a separate till: stock and sales drift apart, expiry is found too late, GST is rebuilt every month, shared logins leave no trail.

Who buys and uses it

- **Buyer:** owner or proprietor of an outlet or chain; MD or finance head of a distributor
- **Influencers:** store manager, accountant or CA
- **Users:** Owner/Admin, Manager, Cashier, Store staff, Auditor, plus the HeeLIKS operator
- **Verticals:** pharmacy, retail and fashion, grocery and kirana, bookstores, industrial spares

Commercials (from code and site)

- Starter ₹999, Growth ₹2,999, Business ₹5,999 a month; quarterly and yearly cycles
- Perpetual on-premise ₹7.5 L + optional 5% AMC from year two
- Add-ons ₹599/user and ₹699/outlet a month; 14-day trial; Razorpay

MODULE	WHAT IT DOES (VERIFIED)	SCREENS
Point of Sale	Barcode/SKU search, FEFO batch pick, role-capped discounts, split tender (cash, card, UPI, credit), park, thermal/A4/email receipts	S, X
Registers	Opening float, counted close, Z-report with variance	S
Returns & notes	Invoice lookup, restock or write-off, credit notes, s.34 credit/debit notes	R
Catalog	SKU, HSN, MRP, barcodes, Code128 labels, brands, UoM, tax classes, import	C
Inventory	Append-only ledger, batches and expiry, adjustments, transfers, counts, locations	I
Procurement	PO draft → approve → receive, GRN with batch/expiry, supplier returns, reorder → PO	U
Partners	One party master; GSTIN, credit days and limits, opening balances	P, B
B2B order-to-cash	Orders reserve stock, invoice from order, challans with LR/e-way ref, POD, receipts, customer ledger, AR aging, order book, collections	B
Dashboard	Live KPIs, trend, top products, alerts, outlet switcher	D
Reporting	21 reports + hub; Excel, PDF, CSV	Q, E
GST compliance	CGST/SGST/IGST, GSTR-1 export, HSN, gapless series audit	Q
Alerts	Low-stock and expiry alerts, email, auto-resolve	T
Onboarding & import	Go-live checklist, workbook and Tally XML import, dry-run, commit, undo, reconciliation, history archive	O
Security	Enforced TOTP, backup codes, lockout, one session per user, idle expiry	A
RBAC & audit	10 permissions, 5 roles + custom, discount caps, field-level audit diffs	T, V
Settings	Outlet profile, tax, invoice templates, users, help manual	T
Subscription	Plans, add-ons, usage meters, trial, grace, suspension gate	T, W
Platform console	Fleet KPIs, provisioning, lifecycle, module overrides, payments, audit	M
Website & signup	Self-serve signup → payment → provisioning	W
REST API	Tenant-scoped, RBAC-checked: products, stock, sales	T

181 captures cover every module; the coverage map has no gaps

GROUP	MODULE	COUNT
A	Sign-in and two-factor	6
B	B2B orders, challans, receipts, ledger, AR	19
C	Catalog and masters	10
D	Dashboard	4
E	Exported documents	7
I	Inventory	9
M	Platform console	12
O	Onboarding and import	9
P	Partners	2
Q	Reports	23
R	Returns and notes	6
S	POS, invoices, registers	9
T	Settings, audit, API	10
U	Procurement	8
V	Role-based views	8
W	Website and signup	11
X	Dark mode	3
Z	Four industry workspaces	25

What the coverage file represents

HeeLIKS_coverage.csv is the product team's traceability matrix. Each row ties a module, feature or USP to a persona, a live URL, the screenshot that proves it and the source-deck slide that shows it. 22 modules, 89 features and 16 USPs, all *covered*. It is identical to HeeLIKS_deck_work/coverage.csv. We will reuse it as the screenshot index for the new deck and catalogue.

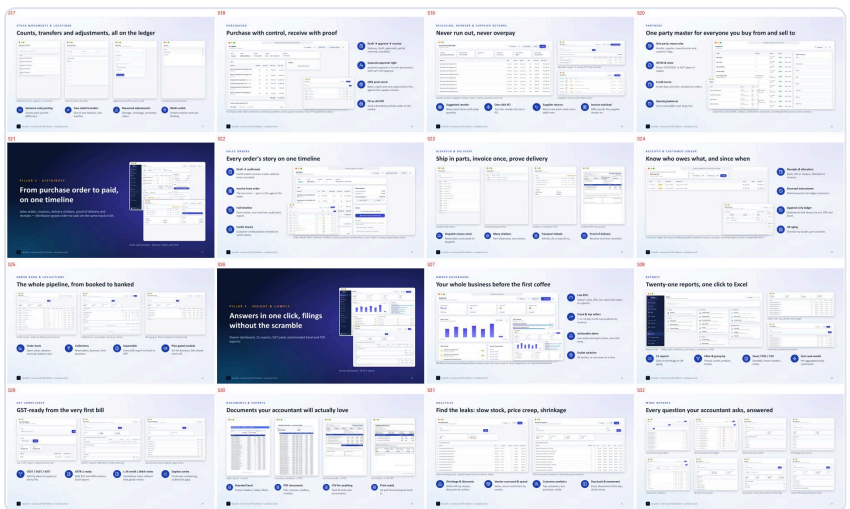

Quality

- 163 of 181 captures are 2400 × 1500; the rest are full-page or A4 exports. All are sharp enough for full-width use.
- All data is a seeded demo: MediCare Pharmacy, Urban Threads, FreshMart, Page Palace Books and Titan Equipment & Spares. These are fictional workspaces and will be labelled “(demo data)”.
- One caution: “Titan” is also a well-known Indian brand. We will caption that workspace as a demo industrial distributor so it is never read as a customer.
- No real personal or client data seen. Demo emails use .local or example domains.

Best hero screens

D02 dashboard · S12 POS split tender · I01 stock overview · I02 batches & expiry · U02 PO detail · B06 order with timeline · B12 challan with POD · Q05 GSTR-1 · O01 go-live · T07 audit diff · M03 console · V02 discount cap.

Rich, honest content in the wrong system, and too many unreadable thumbnails

Source slides 17–32 as rendered in PowerPoint.

Keep

- Five-pillar structure (Sell, Stock & Buy, Distribute, Insight & Comply, Govern & Scale)
- Code-counted numbers with a source line; roadmap clearly separated
- Speaker notes with evidence on every slide

Fix

ISSUE	WHERE	ACTION
Off-system design	All 54	Rebuild on the locked MavionTech layouts, type and Midnight + Amber
3–4 screenshots per slide, unreadable	17, 23, 30, 32, 36, 39, 40, 44, 46	One hero screen plus at most one inset; crop to the area that proves the point
54 slides, much repetition	10, 31–32, 40, 44, 46, 47	Merge to about 42 slides without losing module depth
No workflow diagrams	Purchasing, order-to-cash, import	Add native diagrams: procure-to-stock, order-to-cash, stage → dry-run → commit → undo
“Five industry editions”	4, 7, 45	Qualify as five verticals configured at signup; not separate editions
“Over 1,000 SKUs, perfectly organised”	14	Title from capability, not demo data
“Live in days” and the 4-week rollout	33, 34, 52	Keep, labelled indicative
Website: “Uptime engineered”, “Live in 60 seconds”, “Nine modules”	heeliks.com	Not reused: no uptime evidence; module count is out of date (code has 16 apps, B2B included)
No pricing or deployment slide	—	Add plans and the on-premise licence from code

Not available (flag, do not invent)

Customer references, testimonials, certifications, SLA and uptime, implementation fees. Also e-invoice (IRN) and e-way bill *generation*: today only the e-way bill number is recorded, and both are on the roadmap.

Cited answers, finished documents and a coding agent, under organisation governance

Positioning

An enterprise AI assistant platform. Teams chat with leading models over their own documents, with a citation on every grounded answer. They generate Word, PowerPoint, Excel and images, and hand engineering tasks to a sandboxed coding agent that commits and opens pull requests. All of it runs under organisation policy, audit and a token-optimisation engine. Tagline: *“Answers you can cite. Code you can ship.”*

Problem it solves

AI pilots stall: answers without sources, company data in consumer tools with no policy or audit, copilots that suggest lines but don't ship work, and token bills nobody can predict.

Who buys and uses it

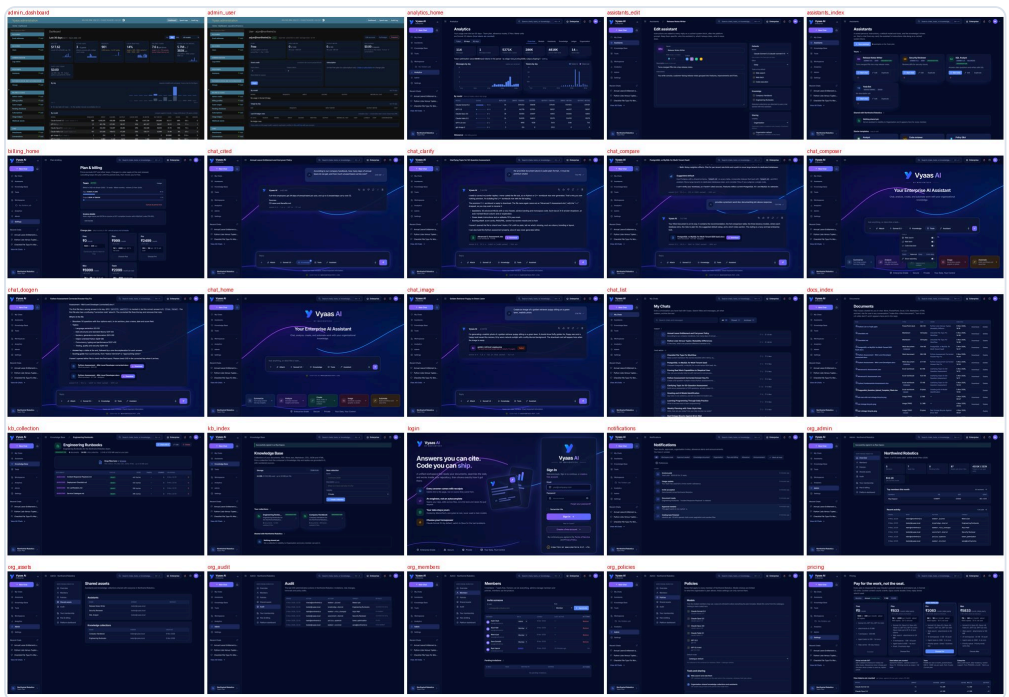

- **Buyer:** CTO, Head of Engineering, IT Director
- **Users:** engineers, analysts and knowledge workers, operations; Owner, Admin and Member roles
- **Market:** India-origin, priced in INR and USD (Razorpay and Stripe)

Commercials (from code)

- 7 tiers: Guest, Free, Plus, Pro, Max, Team (per seat, minimum 3), Enterprise
- Pro $29 or ₹2,499 a month; Team $25 or ₹2,099 per seat; 2 months free on annual
- Metered in Sonnet-equivalent tokens; GST at checkout

PILLAR · MODULE	WHAT IT DOES (VERIFIED)	SCREENS
Converse · Chat	Streaming chat, extended thinking, attachments, clarifying-question cards, per-chat model, effort and web toggles	7
Converse · Knowledge Base	Collections, upload and ingestion, BM25 retrieval, numbered citations	2
Converse · Documents	docx, pptx, xlsx, csv, md, html and images from chat; personal library	2
Converse · Assistants	Custom assistants with model, tools, knowledge and instructions; templates; sharing	2
Converse · Tools	Web search, web fetch, code execution; per-user preferences, plan gating	1
Build · Coding Agent	Resumable agent in a gVisor sandbox, no network by default; files, diff, terminal; 3 run modes with a destructive-command gate; Git import, commit, push, PR (GitHub); Connect companion	4 (no PR screen)
Govern · Organizations	Owner/Admin/Member, invites, policies, shared assets, audit log	5
Govern · Token Optimisation Engine	L1–L3 pipeline: tool pruning, history compaction, attachment selection, guarded compression; per-message savings	via analytics
Govern · Model Catalogue	Provider-agnostic: Claude and OpenAI models, per-plan gating	composer, policies
Govern · Billing & Plans	Tiers, usage allowance, checkout, credits	3
Govern · Analytics	Tokens and cost by model, day and member	2
Govern · Admin console	Platform dashboard, per-user report, grant credits, suspend	2
Govern · Notifications	Task done, approval needed, document ready, invites, plan events	1
Platform · Accounts	Email sign-in (allauth), guest trial	1

31 sharp captures; five planned screens were never taken

25 of the 31 Vyaas captures (all 2400 × 1500, dark theme, demo organisation “Northwind Robotics”).

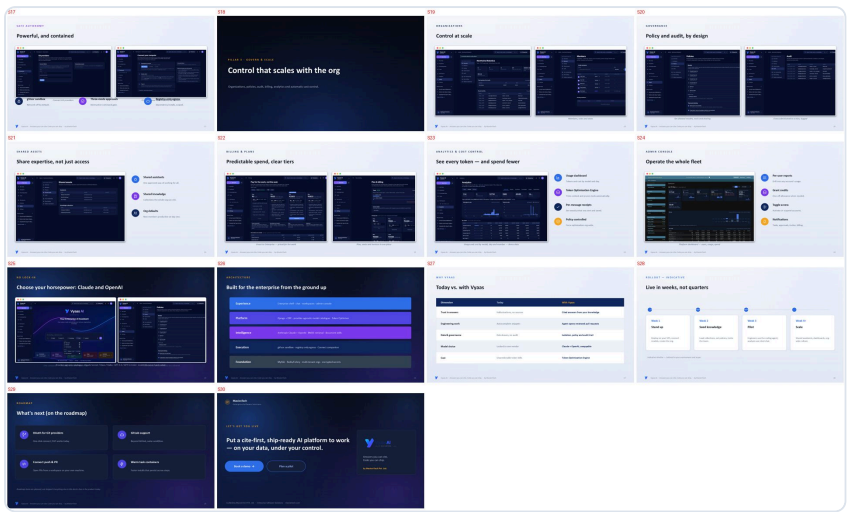

PLANNED CAPTURE (DECK_WORK/COVERAGE.CSV)	STATUS
Agent session with pull request (w_session)	**Gap** · the headline “Code you can ship” has no screen
New workspace / Git import (w_create)	**Gap** · w_index shows the create panel
Analyze an attachment (chat_attach)	**Gap**
Optimised prompt receipt (chat_optimised)	**Gap** · savings shown only in analytics
Global search (search)	**Gap**
All other 31 planned captures	✓

Implications

- Coding-agent slides will use w_detail (files, diff, terminal, task rail), w_providers and w_connect, plus a native workflow diagram. The PR step is verified in code (apps/workspace/gitops.py) and will be described, not shown.
- Dark screenshots read poorly when shrunk. The new deck will use fewer, larger screens with tight crops.
- Demo users (for example arjun@northwind.io) are fictional seed data and will be labelled demo data.
- The pricing screen lists model names (Sonnet 5.5, Opus 5.5, GPT-5.5). These are correct in the code today but will date, so slides will say “Claude and OpenAI models”.

Optional If MavionTech can capture w_session and chat_optimised, the two strongest differentiators gain screen proof. The build does not wait for this.

A clear story with overlaps, low contrast and one wrong number

Source slides 17–30 as rendered in PowerPoint.

Keep

- Three pillars: Converse & Create, Build & Ship, Govern & Scale
- Eight differentiators, each tied to code
- Roadmap kept apart from shipped features

Fix

ISSUE	WHERE	ACTION
Off-system dark theme	All 30	Rebuild on MavionTech layouts; dark slides only where the system allows
Labels overlap screenshots	13, 17, 25	Rebuild layouts; PowerPoint overlap check
Wordmark "AI" illegible on dark	1, 30	Use the mark plus a live-text product name
"5 plan tiers"	4	**Wrong.** Code has 7 tiers (6 public); correct it
Pricing shown as USD only in notes, INR on screen	22	Show both, as the product does
"Data isolation"	7, 20, 27	Qualify: organisation-scoped data, encrypted secrets, self-hostable. Not a database per tenant
No workflow diagrams for RAG, agent or optimiser	10, 16, 23	Add native diagrams: ingest → retrieve → cite; task → sandbox → approve → PR; L1–L3 pipeline
"Live in weeks" rollout; "deploy on your VPS"	28	Keep, labelled indicative; the deploy scripts exist (deploy/install.sh)
Very small grey body text on dark	Many	System minimum: body 11 pt, captions 11 pt

Not available (flag, do not invent)

Customers, testimonials, certifications, measured token savings (the engine reports savings per message, but there is no portfolio-wide %), uptime and SLA, data-residency statement. GitLab, OAuth Git connect, and push/PR from Connect are roadmap.

PROPOSED STRUCTURE · HEELIKS

44 slides: five pillars, with depth matched to 20 modules

1. Cover
2. The problem
3. Meet HeeLIKS
4. At a glance (code-counted)
5. Who it serves
6. Product map: 5 pillars, 20 modules
7. Differentiators
8. **Sell** · divider
9. Point of sale
10. Counter features: park, receipts, keys
11. Registers and Z-report
12. Returns and credit notes
13. **Stock & Buy** · divider
14. Catalog and masters
15. Inventory ledger (diagram)
16. Batches, FEFO and expiry alerts
17. Counts, transfers, adjustments
18. Procure-to-stock workflow (diagram)
19. Purchase orders and GRN
20. Reorder and supplier returns
21. Partners
22. **Distribute** · divider
23. Order-to-cash workflow (diagram)
24. Sales orders
25. Dispatch, challans and POD
26. Receipts, ledger and AR aging
27. **Insight & Comply** · divider
28. Owner dashboard
29. 21 reports (matrix)
30. GST compliance
31. Documents and exports
32. **Govern & Scale** · divider
33. Go-live and import (diagram)
34. Security and sign-in
35. Roles, caps and audit
36. Subscription and platform console
37. Architecture: database per tenant
38. Integrations and stack
39. Five verticals
40. Today vs with HeeLIKS
41. Plans and deployment
42. Indicative rollout
43. Roadmap (planned)
44. Close

Built with the approved generator (mt.js, deckkit.js), the six-deck layouts, Calibri, Midnight + Amber and the product accent. Every screen is a real capture labelled “(demo data)”; every slide has notes with sources; planned items are labelled. Change log as .docx, as for the six approved decks.

PROPOSED STRUCTURE · VYAAS AI

34 slides: three pillars, with diagrams where screens cannot show the mechanism

1. Cover
2. The problem
3. Meet Vyaas AI
4. At a glance (code-counted)
5. Who it's for
6. Product map: 3 pillars, 14 modules
7. Differentiators
8. **Converse & Create** · divider
9. Chat
10. Cited answers (diagram)
11. Knowledge Base
12. Documents and images
13. Assistants
14. Tools
15. **Build & Ship** · divider
16. Coding agent workflow (diagram)
17. Agent workspace
18. Safe autonomy: sandbox layers
19. Git providers and Connect
20. **Govern & Scale** · divider
21. Organizations and members
22. Policies and audit
23. Shared assets
24. Token Optimisation Engine (diagram)
25. Usage analytics
26. Plans and billing (7 tiers)
27. Admin console and notifications
28. Multi-model catalogue
29. Architecture
30. Security and data handling
31. Today vs with Vyaas
32. Deployment and indicative rollout
33. Roadmap (planned)
34. Close

Built with the approved generator (mt.js, deckkit.js), the six-deck layouts, Calibri, Midnight + Amber and the product accent. Every screen is a real capture labelled “(demo data)”; every slide has notes with sources; planned items are labelled. Change log as .docx, as for the six approved decks.

DESIGN SYSTEM AND CATALOGUE IMPACT

Two new accents inside the locked system; eight targeted catalogue edits

Product accents (the only permitted variation)

PRODUCT	OWN BRAND COLOUR	CLASH	PROPOSED ACCENT
HeeLIKS	#1E40AF brand	PragyanNxt #1C3F94	#0369A1 **Ocean**, from HeeLIKS sky #0EA5E9; 5.9:1 on white
Vyaas AI	#3048F0 mark	Agastya #2563EB, Vortex #4F46E5	#7C3AED **Iris**, from the violet in the Vyaas logo and UI; 5.7:1 on white

Both proposals meet the Brand Guidelines' 4.5:1 rule and are traceable to each product's own palette. Iris sits near MavionLearn's violet (#6D4AFF), but the two never share a buyer domain. Alternative for Vyaas: keep its own blue #3048F0 and accept closeness to Agastya.

Category placement

- **HeeLIKS:** a new “Commerce & operations” domain (inventory, POS, distribution)
- **Vyaas AI:** a new “AI & engineering productivity” domain
- Existing domains (education, people and talent, revenue) stay unchanged

Catalogue changes (CHECKPOINT 3)

SLIDE	CHANGE
Back up	Copy the approved Final PPTX and PDF to Corporate_Catalogue/Previous_Versions/
1, 2, 3, 4	“Six” → “Eight”; catalogue brief adds two rows; milestones line
5–7	Technology focus and problems: add evidence lines for the two products where true (AI, GST)
9–13	Portfolio overview, ecosystem map, categories, capability matrix and industries extended to eight
New	HeeLIKS showcase (5 slides) and Vyaas AI showcase (4 slides) after SalesPulse, same templates as the existing six
41 Security	**Qualify** “dedicated database per customer in all six”: true for HeeLIKS, not for Vyaas
46–51	Achievements, opportunities, commercial models, why MavionTech: add the new products' verified facts
All	Page references, footer numbering, PowerPoint QA on all ~61 slides

The existing six showcases are not touched. “Inward Logistics” and “Trackline” in the “Also in the portfolio” line may overlap with HeeLIKS; their names stay as they are, flagged for MavionTech.

OPEN ITEMS

What MavionTech can supply to strengthen both products

ITEM	PRODUCT	EFFECT TODAY	OWNER
Customer references, testimonials, case studies	Both	None claimed; slides use capability proof only	Sales
Pull-request and optimised-prompt screenshots	Vyaas AI	Agent PR shown by diagram and text	Product
Live heeliks.com check	HeeLIKS	Site down during audit; copy taken from repo templates	Marketing
Uptime, SLA, support hours, certifications	Both	Not claimed (website's "uptime engineered" dropped)	Leadership
Data residency and hosting region for cloud	Both	Deployment described without region	Product
Measured token savings (portfolio %)	Vyaas AI	Described qualitatively; per-message receipts only	Product
e-Invoice (IRN) and e-way bill generation dates	HeeLIKS	Roadmap, no dates	Product
Vector logos	Both	PNG marks (1254 px, 640 px) are sharp enough for decks	Brand owner
Product relationship to "Inward Logistics" and "Trackline"	HeeLIKS	Names left as they are in the catalogue	Leadership
Accent approval	Both	Proposed on page 12	This review

Recommendation. Approve the positioning (pages 4 and 7), the outlines (pages 10–11) and the accents (page 12). The two decks will then be built and QA'd in PowerPoint and presented together at Checkpoint 2. None of the open items blocks the build.
